

Generics: $\lambda a \rightarrow \text{Set} \langle E \rangle$

Remember $\text{List} \langle \text{Object} \rangle$ is not supertype of $\text{List} \langle \text{String} \rangle$

Java Collections

Iterable (extended by collections)

- hasNext()
- while (iter.hasNext())
- for each loop
 - for (int x: intList)
- overriding methods for inheritance
 - often override equals method
 - overriding via overriding
 - check if comparing object is null
 - if its an instance of perform a dynamic cast
 - check custom equality
 - can use super.equals instead of writing certain code

Exceptions

- object that can be created
- throw an exception
- catch using try catch
 - if not caught, error propagates upwards
- basically, code executes whether error caught or not
- if a method could throw an exception, include in declaration (throws clause)

IO

- input/output streams
- read/write
- buffering is more efficient generally

Swing

- invoke later
- runnable
- JComponent
 - create a panel } add to a JFrame
- ActionListener
 - add to a button
- using a layout manager
- inner classes, classes contain variables
- Anonymous inner classes in first order function
